

PortfolioHub

Product Roadmap 2026

AI-powered talent platform where candidates control their narrative and recruiters evaluate depth - not keywords. Inspired by the broken hiring pipeline (0.4% success rate) and the need for a centralized hub that solves distribution, trust, and matching.

PRIORITY 1 - Ship Now (High Impact)

[] Verified by PortfolioHub trust badge

AI only uses verified portfolio data, not candidate-controlled prompts. Badge displayed on profiles to build recruiter trust.

[] Privacy controls per field

Users mark fields as public/private. NDA-safe mode so people can list skills without exposing proprietary details.

[] Profile view analytics

Track views, AI chats, and fit assessments per profile. Dashboard showing '5 people viewed your profile, 2 chatted with your AI.'

[] Vanity URLs

portfoliohub.com/username instead of /portfolio/uuid. Shareable in emails, LinkedIn bios, and resumes.

[] Suggested jobs on profile page

When candidates view their own profile, show top matching jobs with AI scores. Passive value that keeps them engaged.

PRIORITY 2 - Differentiators (What Nobody Else Has)

[] AI-to-AI matching

Recruiter posts a job, system auto-scores ALL candidates and surfaces top 10 matches. No browsing needed.

[] 'Don't Apply' honest signal

Visually flag jobs where candidate scores below 30. 'Save your time - this isn't a match.' Builds trust like nothing else.

[] Shareable fit assessment cards

Generate shareable image/link after fit assessment. 'Luis scored 87% for Senior Frontend at Stripe.' Free distribution via social media.

[] Recruiter dashboard

Saved searches, candidate shortlists, bulk AI chat ('ask all 10 candidates about distributed systems'), outreach tools.

[] Weekly AI career digest email

'3 new jobs match your profile this week. Top match: Senior Dev at Acme (92%).' Keeps users engaged without opening the app.

PortfolioHub

Product Roadmap 2026

PRIORITY 3 - Moat Builders (Hard to Copy)

☐ Voice/video AI agent

Candidates record a 2-min intro video. AI references it in chat: 'Hear Luis explain his approach to system design.'

☐ Skill verification challenges

AI-generated coding/design challenges that add a 'Verified: React (Advanced)' badge. Solves 'anyone can claim skills.'

☐ Collaboration graph

Visual network of verified collaborations. 'Luis collaborated with 3 verified engineers on 2 projects.' Hard to fake.

☐ Portfolio SEO pages

Meta tags, Open Graph images, structured data per profile. When someone Googles 'Luis Lozoya developer,' PortfolioHub ranks.

☐ API for ATS integration

Let companies pull candidate data into Workday/Greenhouse/Lever. Gateway to enterprise adoption.

PRIORITY 4 - Monetization

☐ Free tier

Profile + 5 AI chat messages/day + basic fit assessment.

☐ Pro tier (\$9/mo)

Unlimited AI chat, vanity URL, analytics, weekly digest, priority in search results.

☐ Recruiter tier (\$49/mo)

Dashboard, bulk AI chat, candidate shortlists, AI-to-AI matching, advanced filters.

☐ Featured profiles

Pay to appear at top of search results for specific skills. Non-intrusive monetization.

COMPLETED

☒ AI Chat on portfolio pages

☒ Fit Assessment tool (paste job description, get honest score)

☒ Jobs listing page with filters

☒ AI Job Match scoring per job

PortfolioHub
